### **STONETERRA PRODUCT SPECIFICATIONS**

Block units shall be StoneTerra Retaining Wall units as produced by a licensed manufacturer. Full, standard grade StoneTerra blocks shall weigh at least 1700 lbs. and have consistent measure of 24" x 24" x 48" long. Blocks shall be of the interlocking design.

Full Stone Terra blocks shall have two round columnar male keyways equidistant from the ends and sides to provide maximum shear capacity. The blocks have a male key / female combination that allows for built-in interlock. Keyway system automatically establishes appropriate setback.

Blocks shall be manufactured with a quarried rock architectural finish and as required by project specs. Color of the units shall be concrete gray and may vary slightly. A concrete stain may be applied after installation, if specified.

Each StoneTerra block shall be furnished with a 7-strand galvanized steel (270Kpa) loop lifting eye located in the center of the block relative to the center of mass. Blocks shall be StoneTerra retaining wall units as produced by a licensed manufacturer.

Manufacturers Representative: StoneTerra shall offer the services of a field representative to assist the contractor in the startup of the project. Installation shall be in accordance with the manufacturer's installation guidelines.
